

**MISSISSIPPI VALLEY UNIFORM REGIONAL BARLEY  
NURSERY**

**2012**

FOR OFFICIAL USE ONLY

UNITED STATES DEPARTMENT OF AGRICULTURE  
AGRICULTURAL RESEARCH SERVICE  
NORTHERN PLAINS AREA  
AND  
COOPERATING STATE AGRICULTURAL EXPERIMENT STATIONS

**MISSISSIPPI VALLEY UNIFORM REGIONAL BARLEY NURSERY 2012**

Compiled by Michael C. Edwards

This is a joint progress report of cooperative investigations underway in the State Agricultural Experiment Stations and the Agricultural Research Service of the United States Department of Agriculture containing preliminary data that have not been sufficiently confirmed to justify general release; interpretations may be modified with additional experimentation. Confirmed results will be published through established channels. The report is primarily a tool for use of cooperators and their official staffs and to those persons having direct and special interest in the development of agricultural research programs.

This report includes data furnished by the State Agricultural Experiment Stations, the provinces of Manitoba and Saskatchewan, Agriculture and Agri-Food Canada, and the Agricultural Research Service, and was compiled in the USDA-ARS Cereal Crops Research Unit at North Dakota State University. The report is not intended for publication and should not be referred to in literature citations nor quoted in publicity or advertising. Use of the data may be granted for certain purposes upon written request to the agency or agencies involved.

ACKNOWLEDGEMENT: Dr. James Hammond [Department of Plant Sciences, North Dakota State University] developed the computer program used to evaluate and compile the data for most of this report.

## 2012 Mississippi Valley Barley Nursery

### Summary

It was a much better year for the barley nursery than last year when only four locations were able to contribute useable data for the report. Much drier weather prevailed during this growing season. The reader is referred to the "Nursery Conditions" section immediately following this summary for comments concerning specific locations.

Average planting date was April 24th, 4 days earlier than the 30-year average, while average heading date was the same as the 30-year average (June 26<sup>th</sup>). Average planting date was 8 days earlier than last year, but heading date was only a few days earlier than last year.

Average yield (3929 kg/ha or 73 bu/a) was below both the 30-year average and last year's average of 4555 kg/ha. Entries with the best yields were 2ND28131, 6B08-3210, 2ND28065, M154, and 6B09-4021.

Average test weight was 62.4 kg/hl, slightly higher than the 30-year average of 61.3. Entries with the highest test weights were 2ND27440, 2ND28065, M145, M148, 2ND26333, 2ND27421. No test weights were reported last year.

Lodging data were not reported. Average plant height was 80.2 cm – slightly under the 30-year average. Shortest entries were ND28993, 2ND26333, 2ND27421, 6B09-4235, and SR448.

Disease data from the Cereal Research Centre in Winnipeg are posted in Table 18. The Brandon location also reported disease data that can be found in Tables 19 and 20.

A summary of data from the nursery grown at Aberdeen is in Table 21. Finally, a list of entries and their parentage is in Table 22.

## NURSERY CONDITIONS

### MANITOBA:

BRANDON: Previous crop: .  
Soil type: .  
Fertilizer available: Fall soil test indicated approximately 75 - 80 lbs./acre N in the soil.  
added: 15lbs/acre N applied spring 2012 as 46-0-0, 30 lbs/acre P & 6 lbs/acre N applied with seed as 11-52-0  
Achieve liquid at 0.20L/acre on June 13, 2012  
Prestige A at 0.30L/acre on June 13, 2012  
Prestige B at 0.80L/acre on June 13, 2012  
Remarks: Data were not used due to deer damage in some plots and spills. Normal spring with good moisture, hot & dry summer in July and August. There was no differential lodging.

### MINNESOTA:

CROOKSTON: Previous crop: soybeans  
Soil type: Wheatville, silt-loam.  
Fertilizer available: 15 lbs/a N; 14 lbs/a P; 346 lbs/a K.  
added: 200 lbs/A of 46-0-0.  
Remarks: The nursery had dry conditions early, but good growing conditions through harvest. No lodging occurred this year.

MORRIS: Previous crop: soybeans.  
Soil type: Nutley clay.  
Fertilizer available: pH 6.6; Bray P 25 ppm; K 150 ppm.  
added: none.  
Remarks: The nursery had favorable planting and early growing conditions, but was dry through harvest. No lodging occurred this year.

### NORTH DAKOTA:

CARRINGTON: Previous crop: dry edible beans.  
Soil type: Heimdahl-Emrick, loam  
Fertilizer available: 127 lbs/a N; 19 lbs/a P; 203 lbs/a K  
added: 28 lbs/a N  
Remarks: Planting date was typical for this location. Plant emergence and establishment was excellent. Weather was abnormally hot and dry for the 2012 growing season. Barley samples from Carrington are not suitable for malting due to high protein levels.

FARGO: Previous crop: soybeans

Soil type: Fargo, silty clay loam  
Fertilizer available: 63 lbs/a N; 50 lbs/a P; 490 lbs/a K.  
added: 47 lbs N.  
Remarks: Planting date was typical for this location. Dry conditions after planting caused uneven emergence of plants within plots. The 2012 growing season was the second warmest and tenth driest on record in Fargo.

OSNABROCK: Previous crop: Canola  
Soil type: Barnes-Svea loam.  
Fertilizer available: 21 lbs/a N; 14 lbs/a P; 236 lbs/a K.  
added: 93 lbs N, 37 lbs P.  
Remarks: Planting date was normal for this area. Plant emergence and establishment was normal. Fusarium head blight was a problem at this location despite abnormally hot and dry weather conditions. Unacceptable levels of DON were detected in grain samples from the Osnabrock location.

BOTTINEAU: Previous crop: canola.  
Soil type: .  
Fertilizer available: .  
added: .  
Remarks: The nursery was seeded into a good seedbed with excellent moisture. The early summer progressed normally and the nursery had good plant development. Just prior to harvest the weather turned hot and dry. The crop never really finished, it just died. The nursery had an abundance of volunteer wheat in making the samples unsuitable for malting. Harvest went well, but with sub-par yields, high thins and high proteins.

MONTANA:

SIDNEY: Previous crop: barley.  
Soil type: .  
Fertilizer available: .  
added: .  
Remarks: The nursery was seeded into a nice seedbed with good moisture. The growing season progressed normally with excellent plant development and little disease or lodging. Harvest went well, with dry conditions, good yields and acceptable statistics.

WISCONSIN:

MADISON: Previous crop: soybeans  
Soil type: St. Charles, loam  
Fertilizer available: .

added: none  
Remarks: Data were not used (CV>15). 2012 started out as a very early season with much promise, after one of the warmest winters on record. Planting was done on April 6. Germination looked good with even stands. In early May a wave of leafhoppers migrated through the region and spread Aster Yellows throughout the trials at Madison and Arlington. Outlying stations were not as badly hit. Since AY is not a common disease here, it created much symptomology and growth retardation, i.e. a lack of tillers and chlorosis. Just as plants were rebounding from this event we got into a bad drought that lasted 6 weeks, combined with very high temperatures during late June and July. April's mean temperature was 47.0 F with 2.3 inches of rain. Mean temperature for May was 62.7 F and we had 2.8 inches of rainfall. High temperatures began in June, which had a mean temperature of 71.6 F with 0.87 inches of rain. July and August stayed hot with less than adequate rainfall. July's mean temperature was 78.3 F (13 days of highs above 90.0 F) and August had a mean temperature of 70.0 F. Total rainfall for July and August combined was 5.7 inches. The high temperatures and disease pressure caused yields to be low. Bushel weights were more normal. Lodging pressure was light. Levels of BYDV and powdery mildew were low.

SASKATCHEWAN:

KERNEN: Previous crop: .  
Soil type: .  
Fertilizer  
available: .  
added:  
Remarks: .

TABLE 1. AVERAGE OVER ALL STATIONS FOR THE INDICATED VARIABLES.

| Variety/<br>Entry | Yield <sup>1</sup><br>kg/ha | Test Wt <sup>2</sup><br>kg/hl | Height <sup>3</sup><br>cm | Lodging <sup>4</sup><br>% | Heading <sup>5</sup><br>5/31=0 | Ripe <sup>6</sup><br>5/31=0 |

a *Pyrenophora teres* net-form isolates

b *Pyrenophora teres* spot-form isolate

c *Rhynchosporium secalis* isolate

d *Septoria passerinii* isolate

e *Cochliobolus sativus* isolate

f Reaction categories: 10=VS, 9=S, 7=MS, 5=MR-MS, 3=MR, 1=R

g Reaction categories: R, MR, MS, S

h Reaction categories: R, (MR), (MS), S; ( ) rarely-used categories

i Reaction categories: 0-9 scale: 0=no visible lesions; 4= small; 9= very large, coalescing

x\y = segregating; x(y)= one plant only segregating or seed mix

B= blotchy symptoms

? = equivocal, based on one plant only, or plants small and difficult to read

\*\*= no reading, no or poor emergence

HEAD = Days to 80% heading.

FHB = FHB visual score (0-5)

0 = no infection

1 = incidence low, up to 5% of spikes;

severity low, 1 or 2 kernels per spike affected (up to 7% of head)

2 = incidence low to moderate, 5 to 15% of spikes infected;

severity low to moderate, 1 to 4 kernels (up to 15% of head)

3 = incidence moderate, 15 to 30% of heads;

severity moderate, 2 to 8 kernels (up to 25% of head)

4 = incidence moderate to high, 30 to 50% of spikes infected;

severity moderate to high, 4 to 12 kernels (up to 40% of head)

5 = incidence high, 50% or more spikes affected;

severity high, 5 to 15+ kernels (up to 50%+ of head diseased)

DON = Deoxynivalenol content as analyzed by ELISA technique at AAFC-ECORC
