

MISSISSIPPI VALLEY UNIFORM REGIONAL BARLEY NURSERY

2011

FOR OFFICIAL USE ONLY

UNITED STATES DEPARTMENT OF AGRICULTURE
AGRICULTURAL RESEARCH SERVICE
NORTHERN PLAINS AREA
AND
COOPERATING STATE AGRICULTURAL EXPERIMENT STATIONS

MISSISSIPPI VALLEY UNIFORM REGIONAL BARLEY NURSERY 2011

Compiled by Michael C. Edwards

This is a joint progress report of cooperative investigations underway in the State Agricultural Experiment Stations and the Agricultural Research Service of the United States Department of Agriculture containing preliminary data that have not been sufficiently confirmed to justify general release; interpretations may be modified with additional experimentation. Confirmed results will be published through established channels. The report is primarily a tool for use of cooperators and their official staffs and to those persons having direct and special interest in the development of agricultural research programs.

This report includes data furnished by the State Agricultural Experiment Stations, the provinces of Manitoba and Saskatchewan, Agriculture and Agri-Food Canada, and the Agricultural Research Service, and was compiled in the USDA-ARS Cereal Crops Research Unit at North Dakota State University. The report is not intended for publication and should not be referred to in literature citations nor quoted in publicity or advertising. Use of the data may be granted for certain purposes upon written request to the agency or agencies involved.

ACKNOWLEDGEMENT: Dr. James Hammond [Department of Plant Sciences, North Dakota State University] developed the computer program used to evaluate and compile the data for most of this report.

List of Stations and Cooperators

2011 Mississippi Valley Uniform Regional Barley Nursery

<u>Stations</u>	<u>Cooperators</u>
Aberdeen, Idaho	Don Obert, Chris Evans, USDA, Agricultural Research Service
Brandon, Manitoba	M. C. Therrien, Bill Legge, Agriculture Canada
Winnipeg, Manitoba	J. Gilbert, T. Fetch, A. Tekauz, Agriculture Canada
Crookston, Minnesota	Kevin Smith, University of Minnesota
Morris, Minnesota	Kevin Smith, University of Minnesota
Bottineau, North Dakota	J. Butler, S. Askelson, C. Allen, Busch Agricultural Resources
Sidney, Montana	J. Butler, S. Askelson, C. Allen, Busch Agricultural Resources
Carrington, North Dakota	R. D. Horsley, North Dakota State University
Fargo, North Dakota	R. D. Horsley, North Dakota State University
Osnabrock, North Dakota	R. D. Horsley, North Dakota State University
Saskatoon, Saskatchewan	A. Beattie, B. Rossnagel, B. L. Harvey, T. Zatorski University of Saskatchewan
Madison, Wisconsin	H. Kaeppeler, J. Mochon, University of Wisconsin

2011 Mississippi Valley Barley Nursery

Summary

It was not a good year for the barley nursery, as only four locations were able to contribute useable data for this year's report. Wet weather throughout the region either prevented planting or caused nurseries to be abandoned due to water damage. The reader is referred to the "Nursery Conditions" section immediately following this summary for comments concerning specific locations.

Average planting date was May 2nd, 5 days later than the 30-year average, while average heading date was 4 days later than the average. Average planting date was 10 days later than last year. Heading date (June 29th) was the same as last year.

Average yield (4555 kg/ha or 85 bu/a) was well above the 30-year average, but less than last year's average of 5116 kg/ha. Entries with the best yields were 2ND25272, 6B08-3428, 6B07-1770, 6B07-1825, and ND26249.

Test weight was not reported. The average of 63.1 kg/hl from 2010 was used for the ten year summary calculations as missing data is not allowed by the program used to calculate these values.

Lodging data was not reported. Average plant height was 76.9 cm – shorter than the 30 year average and 6th shortest over 30 years. Shortest entries were 2ND27421, ND22421, 2ND26333, ND26249, and SR432.

Disease data from the Cereal Research Centre in Winnipeg are posted in Table 18. The Brandon location also reported disease data that can be found in Tables 19 and 20.

A summary of data from the nursery grown at Aberdeen is in Table 21. Finally, a list of entries and their parentage is in Table 22.

NURSERY CONDITIONS

MANITOBA:

BRANDON: Previous crop: .
Soil type: .
Fertilizer available: .
added: .
Remarks: Data were not used. CV > 15 due to growing conditions. Late spring, wet June, dry August.

MINNESOTA:

CROOKSTON: Previous crop: soybeans
Soil type: Wheatville, silt-loam.
Fertilizer available: 19 lbs/a N; 16 lbs/a P; 306 lbs/a K.
added: 208 lbs/A of 46-0-0 and 85 lbs/A of 11-52-0.
Remarks: The nursery had wet conditions early, but good growing conditions through harvest. Minor lodging occurred this year.

MORRIS: Previous crop: soybeans.
Soil type: Nutley clay.
Fertilizer available: pH 6.4; Bray P 23 ppm; K 135 ppm.
added: none.
Remarks: The nursery had favorable planting and early growing conditions, but May was cold and wet, June was dry, and July was wet again. No lodging occurred this year.

NORTH DAKOTA:

CARRINGTON: Previous crop: soybeans.
Soil type: Heimdahl loam, sandy loam
Fertilizer available: 32 lbs/a N; 22 lbs/a P; 299 lbs/a K
added: 110 lbs/a N
Remarks: Planting date was later than usual. There was a surplus of moisture during most of the growing season. Plot emergence and plant stands were excellent. A hail storm destroyed these plots before the barley matured and the plots were abandoned.

FARGO: Previous crop: soybeans
Soil type: Fargo, silty clay loam
Fertilizer available: .
added: .
Remarks: Drowned out.

OSNABROCK:	Previous crop:	Canola
	Soil type:	Barnes-Svea loam, loam.
	Fertilizer available:	.
	added:	.
	Remarks:	Too wet to plant.
BOTTINEAU:	Previous crop:	canola.
	Soil type:	.
	Fertilizer available:	.
	added:	.
	Remarks:	Abandoned due to water damage.
MONTANA:		
SIDNEY:	Previous crop:	Sugarbeets.
	Soil type:	.
	Fertilizer available:	.
	added:	.
	Remarks:	The nursery was seeded into a nice seedbed with good moisture. The growing season progressed normally with timely rains. The cooperator only had to irrigate once during the growing season. The nursery had excellent plant development and little disease or lodging. Harvest went well, with dry conditions, good yields and acceptable statistics.
WISCONSIN:		
MADISON:	Previous crop:	soybeans
	Soil type:	St. Charles, loam
	Fertilizer available:	.
	added:	none
	Remarks:	Data were not used (CV>15). 2011 started out as a very late season, but due to much hot dry weather, harvest came at a more typical time. Planting was done on May 6. Mean temperature for May was 57.4 F and we had 2.5 inches of rainfall. June had a mean temperature of 70.9 F with 4.4 inches of rain. High temperatures began in June, but rainfall was still adequate. July and August stayed hot with less than adequate rainfall. July's mean temperature was 76.0 F (high mean 93.6 F) and August had a mean temperature of 70.4 F (high mean 92.3 F). Total rainfall for July and August combined was 5.5 inches. The MVBN was harvested on August 1st. The high temperatures and disease pressure, combined with the lateness of planting caused yields and bushel weights to be on the low side. Lodging pressure was low and levels of Powdery mildew were low.

SASKATCHEWAN:

KERNEN: Previous crop: .
Soil type: .
Fertilizer available: .
added:
Remarks: Flooding affected parts of the nursery – not a reliable test for yield.

FHB = FHB visual score (0-5)

0 = no infection

1 = incidence low, up to 5% of spikes;
severity low, 1 or 2 kernels per spike affected (up to 7% of head)

2 = incidence low to moderate, 5 to 15% of spikes infected;
severity low to moderate, 1 to 4 kernels (up to 15% of head)

3 = incidence moderate, 15 to 30% of heads;
severity moderate, 2 to 8 kernels (up to 25% of head)

4 = incidence moderate to high, 30 to 50% of spikes infected;
severity moderate to high, 4 to 12 kernels (up to 40% of head)

5 = incidence high, 50% or more spikes affected;
severity high, 5 to 15+ kernels (up to 50%+ of head diseased)

DON = deoxynivalenol content, as determined by ELISA technique at AAFC-ECORC, Ottawa.
